

ABSOLUTE CONCRETE

Feed Channels

Feed Channels manufactured by Absolute Concrete are sought after for their great finish. They are available with or without feet and with or without ends. They come in two sizes, wide for large feed pads or narrow for areas with less room. They have tapered edges to prevent stock injury and are steam cured and ready to go as soon as they are stacked in the yard.

A new addition to the range is the trough/channel featuring a channel with a ballcock protected trough built into the end, enabling stock to drink without having to add an additional trough and disrupt the nice clean lines of your feed pad.

We have our own hiab trucks and have delivered anywhere from Rotorua to the Cape.
